Prune Belly Syndrome, also known as Eagle-Barrett Syndrome, is a rare and uncommon condition that effects 1 in 40,000 live births.

20% of patients are still-born, 30% will not survive their first two years of life, and the remaining 50% have varying degrees of urinary pathology.

The Prune Belly Syndrome network provides support and information to all affected by Prune Belly Syndrome.... patients, families, friends, health-care professionals alike.

Frank Walker (born with Prune Belly Syndrome and the current PBSN Vice President) has put together these events to raise money for greater awareness of this condition.
